MYTHS AND REALITIES!

Articles

TK RAMCHAND

1. MYTHS AND REALITIES!

(Data collected from internet.)

in the beginning God created heaven and earth. What is God and where was God no clue! (Age of Earth 4.54 billion years old.)

The concept of day is wrong. Without a source of light and a body for the light to fall on it, there is no day or night. Here there is only the body, the earth, no source of light.

the first day - light was created. There can't be light without a source. It makes clear that till then there was no light. That means God was living in darkness! But the concept is that God has eyes to see. (Humans made in the image of God.) In darkness there is no need for eyes.

the second day - the sky was created. Sky is just the view of the space from the earth! Without sun, moon, stars, planets etc. the mention of sky has no relevance!

the third day - dry land, seas, plants and trees were created.

Plants and trees cannot exist without sun. Sun was created only after creation of vegetation!

the fourth day - the Sun, Moon and stars were created.

But sun is older than earth. Age of Sun 4.603 billion years old. There are stars as old as 14.5 billion years. Then the existence of other planets of the solar system were not known, as they are very difficult to be seen by naked eyes. None knew the existence of galaxies, black-holes etc.

the sixth day - animals that live on the land and finally humans, made in the image of God, were created.

Therefore, God is considered as a living being!

God made everything – If so, why God created evil?!

God made everything good - Then who created the bad?! There must be some other power to do so! So, it contradicts the assumption that God created everything.

VARAHA Incarnation:

Even in imagination it is absolutely impossible to think, the whole earth taken under the ocean, which is only a part of the earth! So, it is a blunder committed by the story teller! That means Varaha incarnation didn't take place. God had not taken that incarnation! The demon Hiranyaksha stole Earth and took it to the planet to his kingdom in netherworld. Varaha-incarnation was meant to retrieve the world hidden under the ocean! If everything is created by God, the demon too is created by God. We all know that there is no netherworld. There are a number of temples and cave temples in the name of an incarnation that hadn't taken place! Now, religious Pandits of all religions are grossly engaged in giving new interpretation to the words in religion so as to save the death of the religions! To ocean they are giving the meaning cosmos so as to interpret the hiding of earth under ocean, to mean in the vast universe! Even if it takes thousands of years, the death of religions is sure as science advances and reaches even the most superstitious! Those who live care of religions will do everything to avoid the death of the religion, they pretend to believe in!

First of all, we all know that there doesn't exist Heaven or Hell, that point itself is sufficient to discard the whole story! They exist only in imagination and not in reality!

If **Vamanan**, the God's incarnation into a dwarf, could cover the heaven and earth in two steps, already Mahabeli had been crushed under God's feet, if Mahabeli was there! But, if Mahabeli was in the Paathaalam (hell) how can Vamanan again trample him into it again?

Imagination has no boundary is amply exposed in the conception of "Paalaazhi" which can exist only as such in the author's jest imagination!
There can't be an ocean of milk. Milk is got by milking the mammary glands of cattle, water buffalo, humans, goats, sheep, and, more rarely, camels, horses and donkeys. To have an ocean of milk how many animals are to be milked. Animals can't just pass milk from their body just like urinating! So, a lot of human beings should do the milking. So, it is an impossibility imposed into imagination! As 'paalaazhi' didn't exist the rest of the story too didn't happen.

These are just a few to mention! They are all against the realities the science present.
Age of earth: 4.543 billion years

Age of Sun: 4.603 billion years.

Age of the star: 1 to 10 billion years

Age of Man: Between five million and seven million years.

Conclusion: Sun is older than Earth. Many stars are very much older than Earth. Whereas Earh is billions of years old, Man is only millions of years old.

This is what science tells. Didn't they contradict with what religions say?!
The rest are left to your thinking.
What is the necessity of a vehicle for God to ride, who can just wish to reach a place, and in no time, God will be at the destination! Even mouse not spared!
What is the necessity of an animal or a bird for God to be used as a conveyance?!

'Vedism' or Veda Religion, was the religion of those talked ancient 'Indo-European' language, entered India from the place today known as Iran in about 1500BC. In that religion, the most important God worshipped in that religion was INDRA. When that religion died, Hindu religion, the then that was taking shape snatched away all the 'Vedas'. Gave Indira too, a position in Hinduism! (When 'Two turns into One', as the new situation emerged requires highly necessary, the creation of new posts, at least almost equivalent, suitable new posts are created! Aren't we experts in coining names to meet with such emergencies?! We could invent posts like 'Rajapramukh', 'Deputy Prime minister', 'Deputy Chief minister' and so on!) Gave him the great name 'Devendran' and the status of a God, and chained him there on the chair; on condition that he will not be a God worshiped by humanity! I have visited mosques, churches, temples, pagodas etc.! From the time I got freedom to think myself I am learning religions, mainly the five major religions. The visits were part of it.

There are some 4,300 ***religions*** *of the* ***world****. Religions too die. History could collect details on only ten religions dead. They are* ***Minoan, Mithra, Manichae, Aten, Ashur, Veda, Canaanite, Pagan, Olmec, Tengri;*** *the Religions, dead are numerous! As the religions die their Gods too die. The present-day major religions too may one day die. Sometimes it may take thousands of years. (Very rarely are new religions born!) Those who manage livelihood and positions care of God will do anything and everything to keep the religions alive.*

All festivals, and all the religious gatherings, are intended to keep God alive. They don't bother the death of innocent superstitious!

Man, religious superstitious, Man finding earnings in religion's name, and Man who play politics in shadow of religion and amass fame, wealth and position: will do everything that could be done to halt the growth of science and commonsense! Academic curriculums will be changed, to fit it enable the keeping up of fellows superstitious, superstitious ever! Religion is a hindrance to the real development and progress of Mankind! If the religion head happens to be the ruler of a nation or the ruling party is a religious one, then it is a curse on the nation's population!

The distinguishing trait found in Believers is that they all refuse to think!

(((((0)))))

2. Lo! The Ambiguities Strange!

Lo! In the beginning God created heaven and earth!
What is God and where was God, no clue comes forth!
There is no heaven anywhere, anywhere in the universe!
The first day, light was created: isn't concept of day, worse!?
(Without a source of light and a body for the light to fall on it,
There can't be day or night: day occurs only after creation of light!)
Isn't it amply clear, God was till then living in utter darkness!
But the concept is that God has eyes to see, in the darkness!
For, later it is said 'humans with eyes were made in God's image'!
(God might have had suffered a lot in darkness, till light's emerge!)

The second day, sky was created! Sky is just the view of the space
From the earth: without sun, moon, stars, planets and All's presence;
Mention of the sky in context that, is having not at all any relevance!
The third day, dry land, seas, plants and trees created! Makes no sense!
Plants and trees cannot exist without sun: created only on fourth day!
Imagination, that earth is older than sun, makes the statement a parody!
The fourth day, sun, moon and the stars were created, there it is told!
But in reality, there exists stars many many, five billion years more old -
Than the sun and the earth! The sixth day – animals that live on the land
Created, and finally, humans, made in the image of God, from dust of land!
(Lo, the earth is just five days older than humanity in Man's mould!
Earth is billions of years old, while Man is only millions of years old!)

Lo, God is a living being! If God created everything, evil too God's creation!
But, statement, God made only everything good, contradicts the assumption!
Didn't it induce the idea that there exists some other power too, (other than -
God), who created everything bad, but known little about that power's plan?!
Didn't that contradict, idea that God is omnipotent, omniscient, omnipresent?!
Isn't that idea, discredit ignominious, that go against the belief of Man innocent!
God spoke to the couple! What might be the language Man knew at birth?!
Indeed, didn't it look strange, serpent too could speak, same language at birth!?
Just for forbidding eating it, why did God create that fruit, is quite confusing!
The ambiguity is, how the serpent came to know, nobody will die of its eating!

Imagining too-impossible, immersing the whole world into its own part, the ocean!
Neither Hiranyaksha stole earth nor Varaha incarnation took place! Only a notion!

In religions, impossibility imposed on inquisitive insatiable innocents, innumerable!
Believing blindly, all things explained and stories told, in books religious, horrible!

(((((0)))))

3. GOD'S INCARNATION INTO PIG HADN'T EVER TAKEN PLACE!

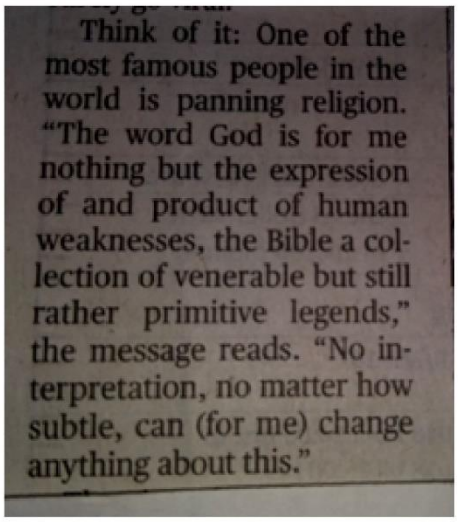
God hadn't ever taken an incarnation into pig! It is only the imperfect offspring of the inane imagination of the author of the Religious Book!

The ocean is a part of the world! How can the whole world be taken under the ocean which is only jest a part of itself?! Poor author might not have ever understood that what he was scribbling was an act, something which is absolutely impossible!

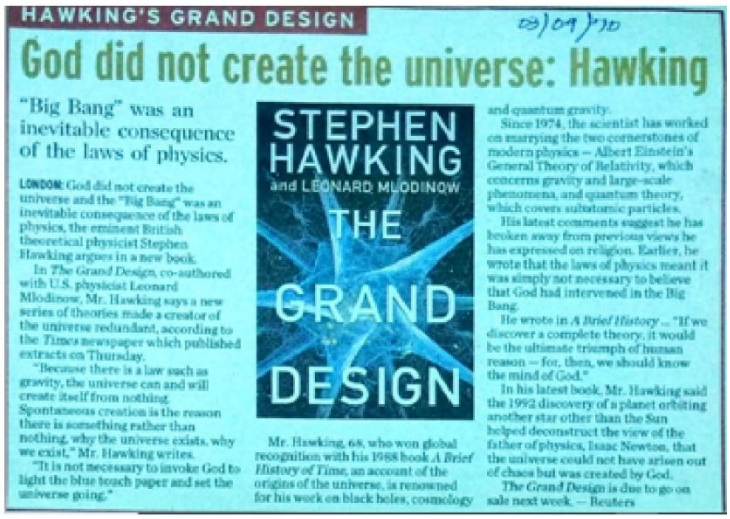
Religions' contents may thunder!
Aghast! Man may stand in wonder!
Themes and stories embedded in Religion may seem fonder!
Prayer Houses and festivals: great crowd attraction sounder!
Man, meek and weak may, forever, surrender!
Religion-exploiters will surely, plunder!
Religion-lunatic may, engage even in murder!
Religions too, would one day die, without any to hinder!
But Man should live, forever! Allow Him, to live, in splendor!
Religion! Just creative imagination of founder!
Believing the story told in them, a great blunder!
Author trespassing into wilderness is given, herein under!
Statement foolish: 'Keeping the whole; in its own part, that's slender.'!
Not, patent of Religion particular any, staging any blunder!
It's common to Religions all: here or there, they flounder!
There is one Man or Men many, behind every Religion, yonder!
Religion creation and orchestration, really the greatest money finder!
('God hadn't ever taken incarnation into pig!' That's the reminder!)
Isn't it till time reached, for Man, to over and over, ponder?!
What reply, Intellectuals and Religious Pedagogues, have to render?!

(((((0)))))

4. Contributions of the INTELLECTUALS!



Think of it: One of the most famous people in the world is panning religion. "The word God is for me nothing but the expression of and product of human weaknesses, the Bible a collection of venerable but still rather primitive legends," the message reads. "No interpretation, no matter how subtle, can (for me) change anything about this."



HAWKING'S GRAND DESIGN

03/09/10

God did not create the universe: Hawking

"Big Bang" was an inevitable consequence of the laws of physics.

LONDON: God did not create the universe and the "Big Bang" was an inevitable consequence of the laws of physics, the eminent British theoretical physicist Stephen Hawking argues in a new book.

In *The Grand Design*, co-authored with U.S. physicist Leonard Mlodinow, Mr. Hawking says a new series of theories made a creator of the universe redundant, according to the *Times* newspaper which published extracts on Thursday.

"Because there is a law such as gravity, the universe can and will create itself from nothing. Spontaneous creation is the reason there is something rather than nothing, why the universe exists, why we exist," Mr. Hawking writes.

"It is not necessary to invoke God to light the blue touch paper and set the universe going."

STEPHEN HAWKING and LEONARD MLODINOW THE GRAND DESIGN

Mr. Hawking, 68, who won global recognition with his 1988 book *A Brief History of Time*, an account of the origins of the universe, is renowned for his work on black holes, cosmology and quantum gravity.

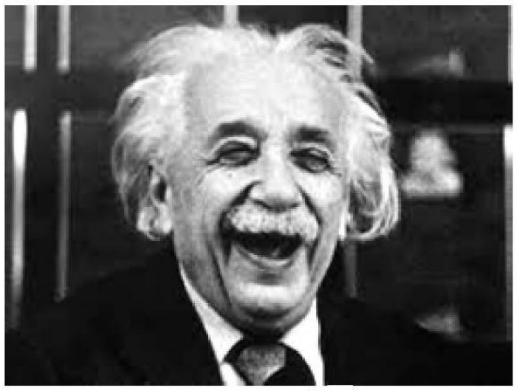
Since 1974, the scientist has worked on marrying the two cornerstones of modern physics – Albert Einstein's General Theory of Relativity, which concerns gravity and large-scale phenomena, and quantum theory, which covers subatomic particles.

His latest comments suggest he has broken away from previous views he has expressed on religion. Earlier, he wrote that the laws of physics meant it was simply not necessary to believe that God had intervened in the Big Bang.

He wrote in *A Brief History* ... "If we discover a complete theory, it would be the ultimate triumph of human reason – for, then, we should know the mind of God."

In his latest book, Mr. Hawking said the 1992 discovery of a planet orbiting another star other than the Sun helped deconstruct the view of the father of physics, Isaac Newton, that the universe could not have arisen out of chaos but was created by God.

The Grand Design is due to go on sale next week. – Reuters



EINSTEIN

HAWKING

Their IQ were above 160.

On his 70th birthday, Stephen Hawking said, "However difficult life may seem, there is always something you can do, and succeed at. It matters that you don't just give up."

In his last book "BRIEF ANSWERS TO THE BIG QUESTIONS" his final words in the book were: "**There is no God. No one directs the universe."**

Professor Hawking was widely considered one of the greatest minds of the 21st century, and was diagnosed with amyotrophic lateral sclerosis (ALS) at the age of 21.

The scientist was only expected to live for two years, but defied expectations by living for a further five decades.

Einstein

"Albert Einstein first predicted the existence of black holes in 1916, with his general theory of relativity. The term "black hole" was coined many years later in 1967 by American astronomer John Wheeler. After decades of black holes being

known only as theoretical objects, the first physical black hole ever discovered wasspotted in 1971.
Then, in 2019 the Event Horizon Telescope (EHT) collaboration released the first image ever recorded of a blackhole."

Some of his great works are:

1. Quantum Theory of Light
2. Special Theory of Relativity
3. Avogadro's Number
4. The Bose-Einstein Condensate
5. General Theory of Relativity
6. The Photoelectric Effect
7. Wave-Particle Duality

"As we think about all of Einstein's work, we have to also considerhow it has influenced those who came after him. Einstein's work has influenced, advanced modern quantum mechanics, the model of physical time, the understanding of light, solar panels, and evenmodern chemistry! He relentlessly questioned the world around him. This is what made him great, his infinite curiosity about the world."

"'The word God is nothing but human weakness to me': AlbertEinstein's letter.

The two-page letter, dated January 3, 1954, was written to Germanphilosopher Eric Gutkind, who had sent Einstein a copy of his book "Choose Life: The Biblical Call To Revolt". "The word God is for me nothing but the expression and product of human weakness, the Bible a collection of venerable but still primitive legends," Einstein wrote in the letter. This remarkably candid, private letter was written a year before Einstein's death and remains the most fully articulated expression of his religious and philosophical views, the auction said in a statement.
"No interpretation, no matter how subtle, can (for me) changeanything about this," Einstein wrote."

Stephen Hawking

1. Singularities – 1970
2. Laws of Black hole mechanics – 1971-72
3. Cosmic Inflation Theory – 1982
4. Model on the wave function of the Universe – 1983
5. "A Brief History of Time" his famous book published on 1988
6. Top-Down Theory on Cosmology – 2006

"On January 8, 2022, the world celebrated the birthday of one ofhistory's

most influential scientific minds, English cosmologist, author, and theoretical physicist Stephen Hawking.

'There is no God. No one directs the universe', says celebrated physicist Stephen Hawking in his final book "Brief Answers to theBig Questions." His book also covers important existential questions such as the creation of the universe, alien intelligence, space colonization, and artificial intelligence.

He was diagnosed with Motor Neuron Disease, also known as ALSor Lou Gehrig's disease) at the age of 20, and was given two yearsto live. Though he was the longest living MND survivor, he died inMarch, at the age of 76. In the film "The Theory of Everything" hisbattle with the disease has been featured for which actor Eddie Redmayne, who played Hawking, received 2015's Best Actor Oscar."

This hoarding wrought and put up by KELVA NAGARI Police Station of Maharashtra, India, is indeed very conspicuous!

(((((0)))))

5. ALLOPATHY

There are crooks in every system of medicines. Fake medicines are there in plenty, in the market! There are two kinds of doctors. Patient friendly and Business friendly!

Almost all allopathic medicines have many side effects. But they are frank in revealing them to the public. We can accept or reject any medicine. But the real fact is that majority of the doctors do not consider seriously, the side effects of the medicines. Their only aim is to cure the disease, to which they are prescribing the medicines. They are not bothered if the patient catches a disease as side effect of the medicine, doctor prescribed! For that side-effect disease too, the doctor will be ready to prescribe another medicine which too may have serious side effects and the process may continue till there reaches a stage when side effects do not seriously affect the patient.

I am under the treatment of mainly two doctors, one is a cardiologist for the heart and the other is a pulmonologist for lungs and respiratory track. Both of them are magnanimous enough to lavishly present me with plenty of drugs! Daily I have to take 12 to 15 medicines! An incident rushes to my mind! My hand was shaking for years. Noticing it, both the doctors advised, me to meet a neurologist. With the great expectation of getting a chance to use at least three more medicines, I met a neurologist and showed him the list of medicines I was consuming daily! But we were stunned, hearing his verdict! “You need not take any medicine for this. This is the side-effect of some medicines you are taking.” A question flashed through our minds, “Do, such great doctors like this one, advising not to take any medicine exist in this wretched world?!”

Many allopathic medicines have constipation as a side effect. I being a continuous user of a number of allopathic medicines I am a victim of the combined constipation side effect of many medicines I use. There had been many occasions when I had to visit the emergency section of the hospital. Once, though they gave me enema, motion didn’t take place. They were all worried and left the place one by one. Much worried the man who gave me the enema was still there. I then requested him to permit me to take some stool out of my anus myself with my finger. As there was no other way, he agreed to my suggestion. I using my left-hand-finger tried and succeeded in removing some very, very hard, dry stools that was blocking the ejection of the loose stools formed as a result of the enema given to me. Then suddenly rushed out the whole stool in the form of liquid. Wasn’t it an occasion when I saved myself?! The man who gave me the enema became happy seeing I getting motion!

On, another occasion when I was admitted in the hospital, seeing my hand shaking my cardiologist doctor took the advice of the neurologist. I was given medicines at the hospital. And when discharged, at home too I took them according to the prescription. I think I took those medicines one month. My health problem worsened, I lost my balance and faced a lot of other problems. As usual I visited the internet, browsed the details of all the medicines I was using. I was surprised to find that three medicines were for Parkinson's disease! (For this neurologist shaking hands means Parkinson's disease! At the first sight of hand shaking, he comes to that conclusion. It seems that he is ignorant of the fact that hand shaking can happen as side effect of medicine Thyronom too! He, never cared to enquire about it anything to me! If had enquired, I would have told him that I am having the shaking for the last 15 years, without giving me any trouble and that I was asked by a neurologist not to take any medicine for it!) Immediately I stopped taking the three medicines prescribed by neurologist and informed my cardiologist doctor, who agreed. You must understand that I took very strong medicines for one month for a disease I do not have!

The doctors must consider the side effects too and ascertain whether the patient can bear the side effects without much problems. Now, their aim is only to cure the disease to which they are treating! They are not bothered if the patient gets affected by another disease as side effect of the medicine prescribed, for they are ready to prescribe another medicine to treat the side effect, and yet another medicine for its side effect if necessary and so on till something results!

(((((0)))))
